Simple Storage Service (S3) - Allows you to store and retrieve information or files, called an object storage system

CloudFront - AWS content delivery network (CDN) service that caches and serves web content ; helps reduce latency and origin load

Elastic Container Registry (ECR) - Stores docker container images containi the SpringBoot application and dependencies

Elastic Container Service (ECS) - Deploys, manages, and monitors your running application containers

Fargate - Provides the CPU and memory to run your containers w/o requiring you to manage servers
